Quarto tips

Building the website

Unicode `\u200B` for zero width space, e.g., in `_quarto.yml` I used it for an item with only an icon in the navigation bar. Note that I tried HTML's `​` but it doesn't work.

Extensions for adding icons such as google scholar and 500px 🌀 (see the website's footer):

```
quarto-ext
    fontawesome
schochastics
    academicons
```

For publishing a Quarto website, I recommend using the second option in the official documentation. After set up, simply call:

```
quarto publish gh-pages --no-prompt
```

Known issues

No option to hide `Edit this page` or enforce it to be on the left sidebar when the table of contents is empty. Issue#5283

For trials
